

Supplementary Figure S2 | TAZ/TEAD1: the co-essential, MTAP-separable, druggable OUTPUT node of the adhesion axis

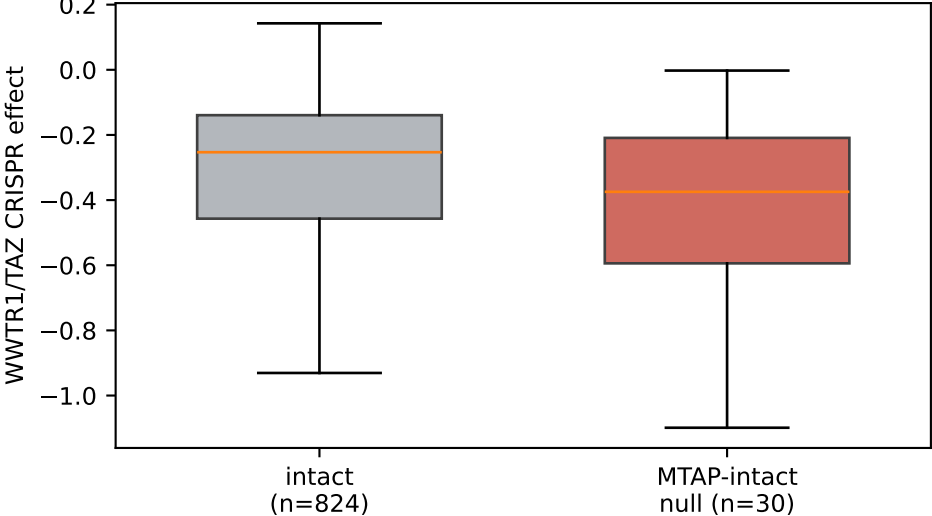

A YAP/TAZ-TEAD effectors (CNS, genome-wide)
TAZ & TEAD1 essential; YAP1/TEAD2-4 buffered

B Hippo NEGATIVE regulators (YAP repressors)
not essential / favour growth = orientation control

C TAZ dependency survives 9p21/MTAP separation
MTAP-intact null vs intact, pan-cancer $p=0.032$

D Tumor (CPTAC): TAZ protein up (mes-independent),
YAP transcriptional OUTPUT flat (mes-confounded)
